

Calculation Meeting

Year 2

+ - x ÷

How do we solve problems?

Addition

- add
- more
- plus
- make
- sum
- total
- altogether

Multiplication

- lots of
- times
- multiply
- groups of
- product
- multiplied by
- multiple of
- repeated addition
- array

Subtraction

- subtract
- minus
- leave
- less
- take away
- difference between

Division

- divide
- divided by
- divided into
- share
- share equally
- equal groups of

Aims of the workshop

- For you to have a clear understanding of the methods we teach and why we teach them.

Year 2 maths curriculum

The national curriculum is broken down into the following sections:

- Number and place value
- Addition and subtraction
- Multiplication and division
- Fractions
- Measurement
- Properties of shapes
- Position and direction
- Statistics

Solve problems with addition and subtraction:

Using concrete objects and pictorial representations, including those involving numbers, quantities and measures applying their increasing knowledge of mental and written methods

Recall and use addition and subtraction facts to 20 fluently, and derive and use related facts up to 100

Add and subtract numbers using concrete objects, pictorial representations, and mentally, including:

- a two-digit number and 1s
- a two-digit number and 10s
- 2 two-digit numbers
- adding 3 one-digit numbers

Show that addition of 2 numbers can be done in any order (commutative) and subtraction of one number from another cannot

Recognise and use the inverse relationship between addition and subtraction and use this to check calculations and solve missing number problems.

**These are the
National
Curriculum
statements for
addition and
subtraction, and
multiplication and
division.**

Recall and use multiplication and division facts for the 2, 5 and 10 multiplication tables, including recognising odd and even numbers

Calculate mathematical statements for multiplication and division within the multiplication tables and write them using the multiplication (\times), division (\div) and equals (=) signs

Show that multiplication of 2 numbers can be done in any order (commutative) and division of 1 number by another cannot

Solve problems involving multiplication and division, using materials, arrays, repeated addition, mental methods, and multiplication and division facts, including problems in contexts.

The road to problem solving

Each year we want to build on the children's ability to problem solve and reason mathematically. In order to solve equations/problems these 4 areas are hugely important.

Number sense

Place value

Problem Solving

Methods

Understanding

Number Sense

Number sense skills allow children to work with numbers.

- Understanding concepts like more and less
- Understanding numbers have an order – stable order principle
- Understanding a number is a symbol for an amount
- Being able to compare amounts/numbers

Understanding

Children need to be able to understand what the question is asking them to do.

- Understand the mathematical symbols - + = \times \div
- Make the link between the symbol and concept, for example + means the number will become greater because we are adding/combining.

Place Value

Understanding that each number represents an amount. Especially important when using double and triple digit numbers.

- Understanding how many ones, tens or hundreds are in a number.
- Good place value knowledge will allow children to break down equations and problems into manageable chunks.

Methods

Children need a variety of methods at their disposal.

Barriers to learning

What might be getting in the way?

- Understanding what a number is representing
- Counting on/back from a given number
- The ability to order numbers
- Knowing 1 more and 1 less
- Knowing 10 more 10 less
- Understanding place value – 100s, 10s and 1s
- Understanding the language – addition, subtract, minus, less etc.

CPA Approach

We use the CPA approach to teach different methods of problem solving.

CPA stands for: Concrete, Pictorial and Abstract

Addition

Methods we teach

- Number lines
- 100 squares
- Partitioning – Breaking down
- Counting on
- Cubes
- Drawings

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40
41	42	43	44	45	46	47	48	49	50
51	52	53	54	55	56	57	58	59	60
61	62	63	64	65	66	67	68	69	70
71	72	73	74	75	76	77	78	79	80
81	82	83	84	85	86	87	88	89	90
91	92	93	94	95	96	97	98	99	100

$$30 + 25 =$$

Bar models

Whole part models

Addition – Number lines

- Start from the first number
- Work out how many jumps you need to do
- The answer is the number you land on
- Extend to jumps of 10 then 1

$$7 + 12 = 19$$

$$5 + 7 = 12$$

Addition – 100 squares

- Find the first number of the equation
- Second number is how many jumps you do
- Land on your answer

- Misconceptions/barriers to learning linked to number

Sense:

- Not being able to recognise and find a number
- Counting the wrong way
- 100 squares can be misleading

$$14 + 3 = 17$$

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40
41	42	43	44	45	46	47	48	49	50
51	52	53	54	55	56	57	58	59	60
61	62	63	64	65	66	67	68	69	70
71	72	73	74	75	76	77	78	79	80
81	82	83	84	85	86	87	88	89	90
91	92	93	94	95	96	97	98	99	100

Addition – 100 squares

- When adding a number that has tens – Do a jump down, then count on.
- $15+22=37$

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40
41	42	43	44	45	46	47	48	49	50
51	52	53	54	55	56	57	58	59	60
61	62	63	64	65	66	67	68	69	70
71	72	73	74	75	76	77	78	79	80
81	82	83	84	85	86	87	88	89	90
91	92	93	94	95	96	97	98	99	100

Addition using concrete and pictorial representations

- Cubes, tens and ones, numicon, drawings, whole part models, bar models
- All of these give clear visual representations of numbers
- Whole part and bar models show how two amounts can create a total

Complete the part whole models.

Addition – Using place value and partitioning

- Break the number down into 10s and 1s.
- Make the equation easier.
- Draw pictorials to aid with understanding.
- Common misconception is to count the 10s as a 1 or vice versa.

$$45 + 23 =$$

$$40 + 20 = 60$$

$$5 + 3 = 8$$

$$60 + 8 = 68$$

$$45 + 3 = 48$$

$$48 + 20 = 68$$

$$26 + 34 = 60$$

$$|| :: :: + ||| : : = (||||) :: ::$$

Other methods

- Finding a 10

$$4 + 3 + 6 = 10 + 3 = 13$$

- Near 10s

$$19 + 6 =$$

Subtraction

- Much the same as addition but backwards.
- Children must understand that subtraction will decrease the value of our amount.
- Key language –subtract, minus, take away, less than, fewer

Subtraction with a number line

- Start from greatest number
- Work out how many jumps backwards you will be doing
- Do your jumps
- The answer is the number you land on.

$$15 - 13 = 2$$

Subtraction using a 100 square

Exactly the same as before but going backwards

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40
41	42	43	44	45	46	47	48	49	50
51	52	53	54	55	56	57	58	59	60
61	62	63	64	65	66	67	68	69	70
71	72	73	74	75	76	77	78	79	80
81	82	83	84	85	86	87	88	89	90
91	92	93	94	95	96	97	98	99	100

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40
41	42	43	44	45	46	47	48	49	50
51	52	53	54	55	56	57	58	59	60
61	62	63	64	65	66	67	68	69	70
71	72	73	74	75	76	77	78	79	80
81	82	83	84	85	86	87	88	89	90
91	92	93	94	95	96	97	98	99	100

Subtraction using drawings

- Draw the total or first number
- Cross out how many we are subtracting

$$48 - 23 = 25$$

$$25 + 23 = 48$$

$$48 = 25 + 23$$

Subtraction using place value and partitioning

- Use place value to make the equation easier.
- Take away the ones first then 10s – Or the other way around depending on which they find best.

$$28 - 14 =$$

$$28 - 4 = 24$$

$$24 - 10 = 14$$

Subtraction

Subtraction equations like the one below are the toughest to grasp. The ones are greater in the second number so children cannot draw lines and dots then cross out without a 10 into 10 1s converting.

The two methods we teach are,

1. Subtract the ones or 10s first, then the other
2. Convert a ten into 10 ones – This gives a clear visual representation of how column method works.

1.

$$34 - 27 =$$

$$34 - 7 = 27$$

$$27 - 20 = 7$$

2.

$$34 - 27 =$$

$$||| \dots - || \dots =$$

As you can't subtract 7 from 4 lines and dots wont work without converting/exchanging.

Convert/exchange a ten from 34 into 10 ones, then cross out like normal.

In the Summer term if the children are ready we will being to teach simple column method to prepare for Year 3.

Multiplication

Repeated addition $4+4+4+4+4+4=24$

- 'Groups of' or 'lots of' the same number.
- Can be represented as an array, repeated addition or by drawing groups using dots and circles (Linked to division).
- Understanding it is commutative (the numbers can be moved or swapped around)
- Counting in multiples – $3 \times 5 = 15$

$$3 \times 4 = 12$$

There are 3 equal groups, with 4 in each group.

You can use an array to multiply.

To find 6×4 , make an array of 6 rows of 4.

Division

- Sharing a number into groups.
- Share the greater number.
- Smaller number – that's how many groups you'll have.

Link division to multiplication by creating an array and thinking about the number sentences that can be created.

E.g. $15 \div 3 = 5$, $15 \div 5 = 3$, $5 \times 3 = 15$, $3 \times 5 = 15$

Division with remainders

Use of lollipop sticks to form wholes- squares are made because we are dividing by 4.

There are 3 whole squares, with 1 left over.

What equations could
you write from this
investigation?

Extra learning

- KIRF homework – Sent home each half term to reinforce quick recall facts to support learning
- Mathletics – if you have not given consent for this, please get in touch with the school office
- Purple mash
