

Key Instant Recall Facts (KIRFs)

Reception Spring 1 – Counting to and from 20

For the remaining half terms, you will receive maths recall home learning. These aim to develop fundamental maths skills which will allow the children to thrive when learning new concepts.

The first of these will be counting to and from 20.

Below there is a number line to 20, the numbers 1-20 and numicon from 1-10. Each can be used in different ways.

- The number line is brilliant for showing the order of numbers and how it increases and decreases.
- The numicon gives a visual representation of what each number actually is.
- For an extra challenge you can ask what is 1 more or 1 less, or hide a number and see if they can work out which is missing.
- You could cut them up and organise them from least valuable to most valuable.
- You could create your own 1-20 counting poster!

1 2 3 4 5 6 7 8 9 10 11 12

13 14 15 16 17 18 19 20
